

## EVENING BULLETIN.

WEDNESDAY EVENING, OCT. 22, 1856.

**CURIOS STATISTICS.**—Some recently published statements regarding the population, extent, trades, and number of dwellings in London show even a more fabulous amount of its greatness than was ever before dreamed of. That city, which at the beginning of the present century numbered 958,000 inhabitants, at the census of 1851 contained 2,362,000. For the ten years preceding, from 1841 to 1851, the population has increased seventeen per cent. Since that time it has increased in the same, if not larger proportion, so that a population of no less than six millions would be the result in 1900. Thus we may see that our great Western cities, St. Louis, Chicago, and Cincinnati, are not alone wonderful in their growth.

The London Chronicle has made a calculation from which it appears that there are more Smiths, Joneses, Browns, Robinsons, and Thompsons in London than any other city in the world (Paris and the Chinese cities excepted) has inhabitants; that Vienna has not as many citizens as London has servants; that the shoemakers, publicans, and dealers in meats and vegetables, of London, would make a larger population by far than all Berlin contains, and nearly as large as that of New York; that London has more last makers than Frankfurt has citizens; and more clerks than Boston has inhabitants.

**A VENERABLE CLERK.**—In the county of Prince Edward, Virginia, only three clerks of Court have been elected since 1754, *a period of one hundred and two years*, viz: John Leneve, elected 8th January, 1754; Francis Watkins, elected 21st April, 1783, and B. J. Worsham, now the clerk of the court, was elected 21st September, 1816. B. J. Worsham commenced writing orders in the clerk's office on the 16th of December, 1803; was appointed clerk pro tem. on the 4th September, 1809, and was made deputy clerk on the 19th February, 1810—making a period of fifty-one years in which he has been engaged in the clerk's office, and a period of forty years in which he has been the clerk of the said court.

The above from the Richmond Enquirer can be beaten in "Old Kentucky." Jo. Allen, Esq., of Hardinsburg, Ky., received the appointment of clerk of both the circuit and county courts of Breckinridge county in the year 1800, and has filled both offices up to the present time, a period of *fifty six years*. Not being a candidate for the circuit court office last August, another gentleman was elected. He has also been a subscriber to the Louisville Journal since its first issue.

**The steamship Borussia** arrived at New York at 1 o'clock on Thursday afternoon from Hamburg, after a passage of fifteen days and seventeen hours. On the morning of the 15th inst., when she was a little over two hundred miles from New York, it was discovered that she had sprung a leak at the stern, and that the water was flowing in with great rapidity.

Shortly after the leak was discovered it was found that there were seven feet water in the hold and that it was rising still faster. The three steam pumps were immediately set in operation, and gangs were organized among the passengers and crew to work on the hand pumps. These were relieved every ten minutes, and the pumps were kept in operation from the moment they were started until the arrival of the Borussia, which was about twenty-eight hours altogether. At first the greatest alarm prevailed among the passengers, but their confidence returned when they were made aware that there was no actual danger of the vessel sinking, and that her hull was divided into four water-tight compartments. With all their exertions, however, it was found impossible to keep the water below seven feet in the hold, and to prevent some of the goods in the express room from being damaged. But the damage, we were informed, was, after all, comparatively trifling, the cargo having all been placed in the forepart of the ship. A portion of the passengers' baggage was saturated, and the mailbags were also wet; but the loss will not exceed a few hundred dollars. The value of water-tight compartments was never more fully realized than in this instance, for had the Borussia not been provided with them there is every reason to fear that she would have foundered at sea, like the ill-fated Arctic.

**ONE OF THE CIGARS.**—A New York physician tells us the following story, and which we feel safe, therefore, as endorsing for a fact:

Two or three years ago a Spaniard from Cuba came to this city to be treated for a disease of the lungs. He came to Dr. M., described his symptoms, and put himself in the doctor's hands.

"Well," said the doctor, "if I undertake your cure, I shall be obliged to impose one condition, and that is rather a hard one for you to comply with."

"What is it?" said the Cuban.

"That you entirely cease smoking until I give you permission to resume."

"Never! I'd rather let the thing kill me. What pleasure is there in life if one cannot smoke?"

The doctor was a smoker himself, and felt some sympathy. So he said:

"Well, perhaps this is beyond your power. But you must solemnly promise me to smoke but one cigar per day, or I will not undertake your case."

The Cuban promised—it was his only chance. Four or five days afterwards the doctor thought he would call upon him as he passed his house, and thus save him a walk to the office for the day. He walked up stairs—knocked—"Come in!"—beheld the Cuban with a cigar about eighteen inches long and a proportionate thickness! He confessed that he had that brand made to order for him, but, said he,

"Doctor, I smoke but one a day, as I promised."

**A Wife's Bill.**—Volume 8th of Cushing's Reports contains an opinion on a case where a mesmeric physician sued a husband for service rendered the wife in his absence. It is to the effect that "the law does not recognize the dreams, visions, or revelations of a woman in the mesmeric sleep as necessities for a wife, for which the husband, without his consent, can be made to pay." These are fancy articles, which those who have money of their own to dispose of may purchase if they think proper; but they are not necessary, known to the law, for which the wife can pledge the credit of her husband."

**Lamartine.**—In his last work, pays the following extravagant compliment to Bossuet. There is undoubtedly truth at the bottom of this magnificent hyperbole, but it is like the grain of mustard seed at the root of the tree which overshadowed the earth:

Bossuet is, in fact, his own monument. His nature was so exalted that it has survived and will eternally survive his works; it was the reflected grandeur of God, not his own. His was the most flowing, the most imaginative, the loftiest, and the most persuasive eloquence with which Providence has ever gifted the lips of man.

The glory of Bossuet is so incorporated with that of his country, that to diminish it would be to deduct something from the majesty of French genius.

His name resembles the summits of the Alps or the Himalaya, enveloped with snows or storms, uninhabitable by man, but which constitute the renown and pride of the countries overshadowed by these lofty ridges, and which serve to demonstrate how nearly earth can approach to the elevation of heaven.

[From the N. Y. Commercial Advertiser.]

### SCIENCE AND THE INDUSTRIAL ARTS.

**NATURAL SILK FABRIC.**—A remarkable circumstance is said to have occurred in the silk factory of M. Garibaldi, at Cremona. It is positively stated that, in that factory, a quantity of silk worms, instead of forming the cocoon as usual, actually wove a kind of silk ribbon, of the breadth of an inch, and the length of upward of twelve feet. In the course of inquiries made in this matter, it has been elicited that a similar phenomenon, only on a much larger scale, took place in Alexandria, in 1836, in the silk factory of Dr. Grillo, where the silk worms wove a ribbon two inches broad, and upward of sixty feet in length, and part of which remarkable product is now preserved on exhibition in the Museum of Natural History at Turin.

**The Earth's Interior.**—In the course of a paper read before the Scientific Congress at Albany, by Dr. Winslow, he observed that the more a geological student contemplated the sedimentary strata, the more he became convinced that the solid crust of the planet is a yielding envelope of no great thickness, overlying a globe of fluid, subject to dynamical influences of such vast power, that mountains and continents undulate upon it as fields of ice follow the tidal action of the sea. The causes and forces of these vast phenomena were considered to be the tension and dynamical agency of the molten and fluid matter in a state of motion underneath. Some think this motion corresponds with the tides, and a French savan attributes it to the action of the moon. Dr. Winslow attributed it to the action of the sun, and supported his theory on the ground that these phenomena occur more frequently when that body is nearest the earth, as in winter, at which time more volcanic eruptions occur than at any other season.

**Mechanic Improvement.**—A patent wooden car-wheel is coming into use in England; it is formed of sections of strong timber, so interlocked that the centrifugal force cannot separate them; the first cost is greater than that of iron, but they are declared more durable and safer.

**New Building Material.**—A new granite for building purposes, durable and handsome, is coming into use. It is made of a composition of sand and lime, and it is said that its indestructibility has been proven by thorough chemical tests. The article is moulded into blocks of fives times the size of common bricks, and in admirable shape for building. Each block has a mortise through it, so as to pass a current of air through the centre of the entire wall of the building, and thus prevent frost from entering. The cost of the article is much less than bricks, and it can be laid more rapidly.

**Discovery in Hydraulics.**—An improvement in engines for lifting water to great altitudes has been or is claimed to have been made by a Massachusetts inventor—an improvement which would seem to fully realize the Marquis of Worcester's 100th proposition. To discharge, with the ordinary engine, one cubic foot of water, at an altitude of 100 feet, would require sixty-two hundred pounds of force through the whole stroke of one foot, the piston having an area of one square foot. The new improvement accomplishes the same result with a force of only sixty-two pounds, the weight of a cubic foot of fresh water. This immense gain is obtained by lifting only the weight of the water discharged at each stroke of the piston; in the ordinary engines the weight of the whole column and the quantity discharged must be lifted at every stroke. The improvement is not confined to lifting pumps, but can be applied to condensers and generating of pressure.

**Progress of Invention.**—The number of patents issued at Washington in 1854 was twenty-one per cent. greater than in 1853; and in 1855 the increase was thirty-three per cent. over that of the preceding year. In 1854 there were issued, among thousands of others, no less than nine patents for churning, eight for corn-shellers, eleven for cultivators, nine for reaping or gathering grain, fifty-six for harvest implements, and thirty-nine for seed-planters.

**THICK AS THREE IN A BED.**—Emigration to the State of Michigan was so great during the years 1835-36, that every house was filled each night with travelers wanting lodgings. Every traveler there at that time will remember the difficulty of obtaining a bed in any of the hotels, even if he was willing to put up with two or three strange bedfellows.

The Rev. Hosea Brown, an eccentric Methodist minister, stopped at one of the hotels in Ann Arbor, and inquired if he could have a room and a bed to himself. The bar-keeper told him he could, unless they should be so full as to render it necessary to put in another with him. At an early hour the reverend gentleman went to his room, locked his door, and soon retired to his bed and sunk into a comfortable sleep. Along towards midnight he was aroused from his slumbers by loud knocking at his door.

"Hallo, you, there!" he exclaimed, "what do you want now?"—particular stress on the last word.

"You must take another lodger with you, sir," said the landlord.

"What! another yet?"

"Why, yes—there is only one in there, is there?"

"One! why here is Mr. Brown, and a Methodist preacher, and myself, already, and I should think that was enough for one bed, even in Michigan!"

The landlord seemed to think so too, and left them to their repose.

### MARRIED.

On Thursday evening, October 16, in Washington City, D. C., at the residence of the bride's uncle, Hon. Robert J. Walker, by the Rev. Smith Pyne, D. D., JOHN DUNCAN, of Yalobusha, and LUCY DUNCAN HOWELL, of Natchez, Mississippi.

### DIED.

In Boyle county, Ky., on Wednesday, 8th inst., in the 54th year of her age, Mrs. ATLANTA B. HAMMON, consort of Jacob Hammon and daughter of John Hammon, Esq., of Boyle county.

**FROM NICARAGUA.**—We have the details of the news by the steamship Texas. Among her passengers was Lieut. Col. McDonald. We make the following summary:

[From El Nisquagua, Oct. 4.]

**GENERAL NEWS SUMMARY.**—Major Heiss goes out by this steamer as the Envoy of this Republic, empowered to ratify the treaty entered into between Nicaragua and the United States.

By a perusal of our files, Eastern readers will perceive that we have been engaged in two skirmishes since the last news was transmitted from Central America. In both these fights the enemy kept the field, but retired in a day or two after, leaving their wounded to be taken by our forces. From the report of the fight of San Jacinto, as given by the traitors themselves, they lost fourteen killed and thirty-two mortally wounded. Sixty-five were slightly wounded, and in the retreat of the remainder the sick and disabled were left to take care of themselves. Such was the fight at San Jacinto.

In our regular paper will be found a list of confiscated property offered for sale on the 1st day of January next.

We are in the receipt of reliable news from the northern section of the State and feel ourselves qualified in stating that the forces in arms against the existing government have become disheartened, and are now in full retreat.

Emboldened by the passive action of the Executive, they advanced at one time as far as Managua; but as the rainy season draws to a close they manifest a strong disposition to disperse.

Our forces will probably take the field on the commencement of the dry season, which will set in about the first of November. Afterwards we cannot reasonably calculate on any very strong opposition being made to the re-establishment of peace in the republic. Delay has fought our battles well.

One company of the Second Infantry, Capt. Grant, left this city yesterday for Managua. The boys looked and felt well, as they went out of town singing merrily.

On the occasion of the recent flag presentation, in reply to a sentiment in his favor, the American Minister replied that he would assure the republicans of Nicaragua that the warmest feelings of amity were entertained by his government in favor of a stable government in this State. As a matter of course, this declaration was received with shouts of applause.

The Ordnance Department is actively engaged in fitting out and mounting a sufficient number of guns to constitute a good field battery. Five cannon are now ready for active service, timbered and well caissons, on good American wheels. Besides these, other pieces, ranging from 24 down to 6 pounds, have been refitted, so as to serve as a defence for the garrison of this city. Howitzers are daily in anticipation, when we shall have a field park superior to anything ever seen in Central America. Mortars and a large amount of shell are expected by the next arrivals. The reinforcements by the last steamer furnished good artilleryists for the service in body of soldiers just from the Crimea.

A man arrived by the last steamer, who was fortunate enough to procure a commission as captain, but, having developed himself as an enemy of the State, has been cashiered and shipped to other parts. Mr. Vanderbilt will find himself outwitted in all his undertakings against the republic, when Gen. Walker can have a chance to handle him or his agents.

The health of the President and all his Cabinet is good.

[Correspondence of the New York Herald.]

GRANADA, Oct. 2, 1856.

An important decree, emanating from the "supreme Executive power" (President Walker), was published here on the 27th ultimo, which may have an important bearing on the future prosperity of this republic. One of these "acts" or decrees of the Federal Constituent Assembly, so declared "null and void" by the present supreme Executive power of Nicaragua, provided that slavery should be forever excluded from the five Central American States. The institution of slavery is, therefore, in effect, now recognized and authorized by the State, as the acts of this republic previous to the compact which the "federal Constitution" established between Nicaragua and the other States of Central America" are now again in full force and virtue. Thus it will be perceived that the late decree of President Walker is highly important to planters and others in the southern portion of the United States, who desire to emigrate with their property to this "garden of the world." And it is presumed that in the recent purchase of Mr. Soule, for \$50,000, of one of the most valuable cacao ranches in Nicaragua, that distinguished American statesman anticipated the issuance of this important decree.

Money here is very scarce; business dull, goods high, and provisions cheap, though good board and lodgings cannot be obtained for less than \$8 per week; single meals, fifty cents, lodgings in hammocks twenty-five cents. The cash resources of the government are not equal to the current expenses, and hence the necessity for issuing scrip. The first issues of scrip, in sum of \$500, bear an interest of 7 per cent. per annum. That now from time to time issued, in amounts to suit, bears no interest at all, and has been sold, in small amounts, as low as five cents on the dollar, but the present value is about 7½ to 10 per cent. The cash receipts of the government, I am informed, are derived chiefly from customs, licenses to retailers, and sales of monopolies to dealers in cattle and to the manufacturers of aguardiente. Aguardiente is manufactured from the native sugar cane and inferior native sugar or dulce. The government has a large aguardiente manufactory at Masatepa, in this (the Oriental) department, which it proposes to lease (as a monopoly within the boundaries of the department) for \$1,800 cash per month. There are several similar establishments in other departments of Nicaragua, and the quantity of this liquor manufactured is very large, affording a very handsome revenue to the government.

There are several similar establishments in other departments of Nicaragua, and the quantity of this liquor manufactured is very large, affording a very handsome revenue to the government.

In regard to the positions and movements of the military forces opposed to General Walker, reports from time to time are so contradictory that it is almost impossible to adopt any safe conclusion. Correct information as to the two battles fought at San Jacinto Ranch, you will have already received by the Tennessee. It is stated that in the last of these two battles—that in which Colonel Cole was killed—the American loss is ascertained to have been some thirty killed, missing, and mortally wounded. The loss of the enemy is of course unknown.

The enemy's force now concentrated at Managua is reported to be about 1,800. The available Walker, or patriot force, at Masaya, is estimated at 500; at Granada, 460; and at Rivas, San Carlos, and Sarapiqui (south of this city), about 200 men, all provided with plenty of arms and ammunition. Six howitzers, throwing twelve-pound shells, purchased in New York for Nicaragua, and to be received by the steamer Texas, now due at San Juan del Norte, will greatly increase the efficiency of General Walker's operations.

Charles Carpenter, late Cashier in the Northern Railway Company of France, was arrested on Thursday night, in a farmhouse, about ten miles back of Newburg, Orange county, New York, by two of the United States Deputy Marshals, and was conveyed to the Eldridge street jail in this city, on Friday, where he now remains in close custody. Carpenter was dressed in the disguise of a farmer, and was divested of his moustache when the officers succeeded in arresting him. The fugitive was captured while asleep in bed, much to his surprise and mortification. His captors will receive the promised reward of \$1,000, offered by Belmont's agent in this city for the apprehension of the prisoner. No money or property of any consequence was found in the possession of the fugitive.

Carpenter expresses great astonishment at the adroit manner in which his capture was effected. The prisoner says that he has arrived in this country quite poor, and has hardly as much money as would defray the expenses of a journey to Europe and back. His story in relation to the fraud upon the Northern railway varies but little from that of Greely, and throws no light upon the subject, further than that already published in the columns of the Herald from time to time as the facts transpired.—N. Y. Herald.

### HELBOLD'S GENUINE PREPARATION.

Highly Concentrated Compound Fluid

#### EXTRACT BUCHU,

FOR all diseases of the Bladder, Kidneys, Urinary and Sexual Organs.

#### JOY TO THE AFFLICTED!

For Diseases of the BLADDER, KIDNEYS, GRAVEL, DROPSY, OBSTRUCTIONS, PAINFUL COMPLAINTS, CHRONIC GONORHEA, GLEETES, &c.

NERVOUS AND DEBILITATED SUFFERERS,

And removes all improper discharges from the Bladder, Kidneys, or Sexual Organs, whether existing in MALE or FEMALE.

From whatever cause they may have originated, and NO MATTER OF HOW LONG STANDING,

Giving health and vigor to the frame, AND BLOOM TO THE FAIR CHEEK.

DEBILITY, which has brought thousands of the human family to untimely graves, thus blighting the brilliant hopes of parents and brightening in the bud the glorious ambition of many a noble youth, can be cured by the use of this.

#### INFALLIBLE REMEDY.

Beware of Quack Nostrums and Quack Doctors.

HELBOLD'S HIGHLY CONCENTRATED COMPOUND FLUID EXTRACT OF BUCHU

Is prepared directly according to the

RULES OF PHARMACY AND CHEMISTRY,

With the greatest accuracy and chemical knowledge and care

devoted in its combination. Its popularity has extended in all directions, and, whether used in town or country, or for private practice, has uniformly given the best results.

Its universal satisfaction and proved the most metalogical and beneficial effects. It has been and is used in all the principal cities in the United States and British Provinces.

Both public and private practice, with great success.

Heretofore no article has been so popular, nor so well received, as this. Helbold's Highly Concentrated Compound Fluid Extract of BUCHU is the most valuable remedy ever offered to the afflicted.

The mass of voluntary testimony in possession of the proprietors is a means of convincing every one who knows to SCIENCE AND FAITH.
